

Portfolio

1. Analysis of a ticketing software system and recommendation on what alternative systems there are, what to use, when to use which system and what's the best for their business. Deliverable was a comprehensive Report.
2. Educational website for a kids school. (NDA signed)
3. Auto Folder creation with user provided patterns and storing empty excel sheets in those folders.
4. Convert pdf into excel sheet. Extract all the information from the pdf which is in a very old format and has a massive >50MB size. Save all information in an organized manner in a new excel sheet.
5. Scraping data from a government-website(scraped the website with hundreds of millions of rows). (NDA signed)
6. Graphics software - Splits an image into **RGBA channels** and merges them in the order the user wants it.
7. Pdf to .CSV converter, get all the pdfs and convert all of them with the same name in the same directory to the .csv file.
8. Automatically Upvote certain posts on a website(can't disclose much) and change proxy if not permitted to upvote.
9. Coronavirus Containment online system. Tracks record of an entire district's resources and patients.
10. Anomaly detection software/script (Research based).
11. Video summarisation. **Summarize video** and get only the frames/video where a certain object is detected. Utilizes ML technologies.

12. Get initial information from .csv/excel file and fill a final excel sheet with processed final version of the data.
13. Get data from **yelp** - without getting banned. If banned, getting data with rotating proxies (Yelp web scraping).
14. Numerous auto **software clicker** software (can't disclose much).
15. A python script that gets an email with certain text in subject and body. From that email, if it has a pdf, retrieve it and save it in a folder with subject name as folder name. Secondly, if the received email is an **Html email**, copy the specific content and convert it into pdf and also convert that pdf into a high quality PNG image. 2 Outputs(PDF and a PNG).
16. PdfCropper software, it crops the first pdf page into half for all pdfs inside a folder and sends it to print. I made it today: August 08, 2020.

17. Did **query optimisation** for a freelance project. Django ORM was incorrectly used and duplicate calls were made. In different apps, the Query was fetching all attributes of different joined tables where only one attribute was required.
18. Bulkfollows Automation: Automates the API calls to **bulkfollows.com** website. It's used to place view orders for youtube, instagram, tiktok and facebook. More about it on my Github link: (<https://github.com/mujeebishaque/bulkfollows-automation>)

19. **Gimp** Automation: Automatic placement of watermarks on thousands of images, automated the change of Font, Font Size (of multiple content on different heights on the image), and added small text on images based on the folder name where the image was stored.
20. More projects at my Github Profile. (<https://www.github.com/mujeebishaque>)
